☰ Reported to station and had all introductory formalities done. We were scrutinized for our interests so that it would be easier to align us with our respective projects that we would be carrying out.

Allotment of Projects and coursewrok for PS-I ✕

🕐 Wednesday, 29 May, 10:26 AM

📅 User event

☰ I was alloted the project for my PS duartion at lenest. My job was alloted as per my interest and I was tasked to create a risk prediction model that would help in predicative analysis for detection and pre-planning for patients who are proven to be at a risk of contradicting a particular condition. I was tasked to create a working and applicable model such that it can beneift the company.

Presentation use of AI tools ✕

🕐 Thursday, 30 May, 12:15 PM

📅 User event

☰

Today, we attended a presentation on the use of AI tools and their impact on various industries. The session was both enlightening and well-received, marking a significant milestone in my professional journey.

The presentation covered a broad spectrum of AI applications, from automation in manufacturing to advanced analytics in healthcare. We were introduced by outlining the fundamental principles of AI and machine learning, setting a solid foundation for the audience. I then delved into specific case studies, showcasing how AI tools are being leveraged to drive efficiency, innovation, and decision-making across different sectors.

One of the key highlights of the presentation was a demonstration of real-time AI applications. By using interactive examples, I illustrated how AI tools can optimize workflows, enhance customer experiences, and unlock new revenue streams. This hands-on approach resonated with the audience, making the concepts more tangible and relatable.We were also on how to optimise our time with AI automation for making presentaions, spreadsheets and much more structured data database applications in genral.

Feedback from colleagues and attendees was overwhelmingly positive. Many expressed appreciation for the clarity and depth of the content, noting that it broadened their understanding of AI's potential and practical applications. Several participants mentioned that the presentation inspired them to explore AI tools in their own work, highlighting the session's motivational impact. Moreover, the discussion that followed the presentation was dynamic and engaging. Attendees posed insightful questions about ethical considerations, data privacy, and the future of AI in the workplace. This interaction not only enriched the conversation but also demonstrated a growing interest and curiosity about AI technologies among my peers.

In reflection, today's presentation was a rewarding experience that reinforced the value of sharing knowledge and fostering dialogue about emerging technologies. It provided an opportunity to contribute to the collective learning of my colleagues and encouraged me to continue exploring and advocating for the responsible use of AI tools in our industry.

Discussion on porter's 5 forces

🕐 Friday, 31 May, 11:13 AM

📅 User event

≡ I learned about Porter's Five Forces today, which is a framework for examining the rivalry that shapes an industry. This Michael Porter-developed model aids in comprehending industry dynamics of competitiveness and prospective profitability.

The following are the five forces:

Threat of New Entrants: The degree to which new rivals can easily enter the market. Strong entrance barriers may shield established businesses.

Suppliers' Bargaining Power: Suppliers have the ability to set their own prices. Less suppliers equate to more power.

Customers' influence on prices is known as their bargaining power. Greater options give consumers more clout.

Risk of Alternatives: The possibility that clients will discover a different technique to accomplish what you do. Higher threat corresponds with more substitutes.

The level of competition between current rivals in an industry. Steep competition may restrict earnings.

Comprehending these factors aids companies in devising tactics to enhance their competitive edge. For example, boosting consumer loyalty can lessen the risk of alternatives, or supplier power might be mitigated by diversifying providers.

Upon further reflection, Porter's Five Forces framework offers a full understanding of the many strategic problems that a corporation may encounter. This is an invaluable instrument for assessing a sector and formulating plans to obtain a distinct advantage. This methodology is going to be very helpful in examining both existing industries and potential new company ventures.
